GeoTracker™ Duo

At-bit Azimuthal Resistivity & Azimuthal Gamma Tools

Well Resolutions Technology

Features

- Resistivity and gamma sensors in one sub
- All the resistivity measurements are temperature compensated for maximum thermal stability
- Continuous inclination and RPM
- 3-axes shock and vibration monitoring
- 150°C and 175°C rated

Benefits

- Duo resistivity and gamma measurements offer a wider range of geosteering applications
- Larger depth of investigation up to 30 in. (0.76 m) means earlier payzone exit warning
- Work in all types of mud including OBM
- Modular design improves tool serviceability by the customer
- Interfaces with legacy Tensor systems

Applications

- Geosteering
- Geostopping
- Shale-gas drilling
- Tight-sands drilling
- Coal-beds drilling

Options

- Annular pressure at bit

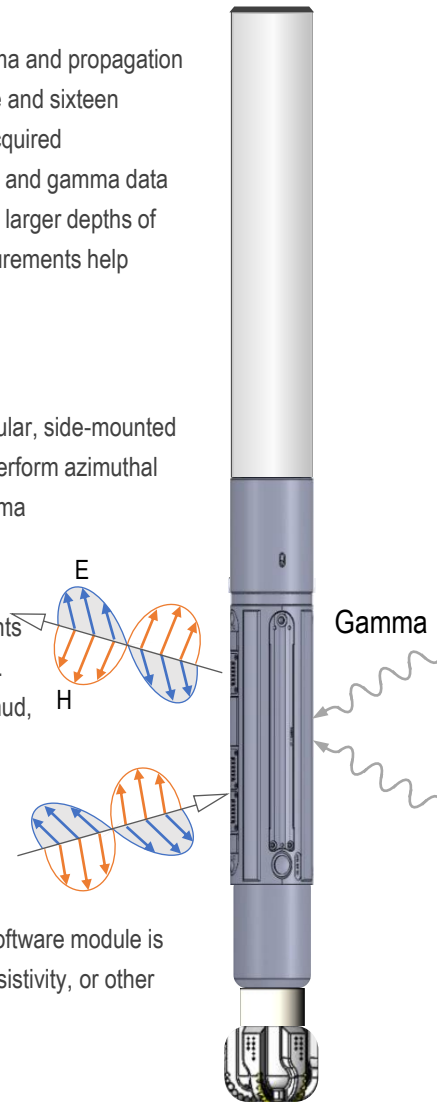
The industry's first At-bit tool that offers both propagation resistivity and gamma measurements from one sub

OVERVIEW

The GeoTracker™ Duo tool combines gamma and propagation resistivity sensors in one at-bit sub. Average and sixteen sectors of gamma and resistivity data are acquired simultaneously. Four quadrants of resistivity and gamma data are available for real-time transmission. The larger depths of investigation offered by the resistivity measurements help reduce unplanned exits from payzones.

PRINCIPLE OF MEASUREMENT

The GeoTracker™ Duo tool employs a modular, side-mounted EM wave propagation resistivity sensor to perform azimuthal resistivity measurement and a focused gamma detector to perform azimuthal gamma measurement. All the data are temperature compensated to provide stable measurements over a wide range of borehole temperatures. By design, the tool operates in all types of mud, including OBM.



MWD INTEGRATION

The GeoTracker™ Duo tool interfaces with many 3rd party MWD systems including the legacy Tensor MWD systems. A standard software module is available for displaying the at-bit gamma, resistivity, or other data transmitted in real time.

OPERATIONAL ADVANTAGES

The modular design of the GeoTracker™ tool offers great field serviceability by the customer, including replacement of the resistivity and/or gamma sensor in shop or even at a rig site.

GeoTracker™ Duo

At-bit Azimuthal Resistivity & Azimuthal Gamma Tools

Well Resolutions Technology

GeoTracker DUO provides near-bit azimuthal resistivity measurements for earlier warning of approaching bed or fluid boundaries.

GeoTracker DUO provides bulk resistivity measurements near the bit which may give early indication of an overpressured zone.

GeoTracker DUO, when run below a mud motor, transmits data across the motor, via a field-proven EM short-hop communication system, to the MWD system above the motor for further transmission to the surface in real time.

GeoTracker DUO performs in any type of drilling fluids including water-base mud, oil-base mud, foams, or other types of drilling fluids.

TOOL FEATURE HIGHLIGHTS

- Compatible with any type of muds, which makes the tool a suitable choice to run in complex hole conditions
- Short length (2.92 ft or 0.89 m) enables Close sensor-to-bit distance
- High-capacity tool memory to record days of measurement data
- Drop-in EM short-hop receiver module retains MWD tool string retrievability
- Available in 4-3/4 in. (either Res or GM), 6-3/4 in., and 8 in. collar sizes

Comparison with LWD Propagation Resistivity

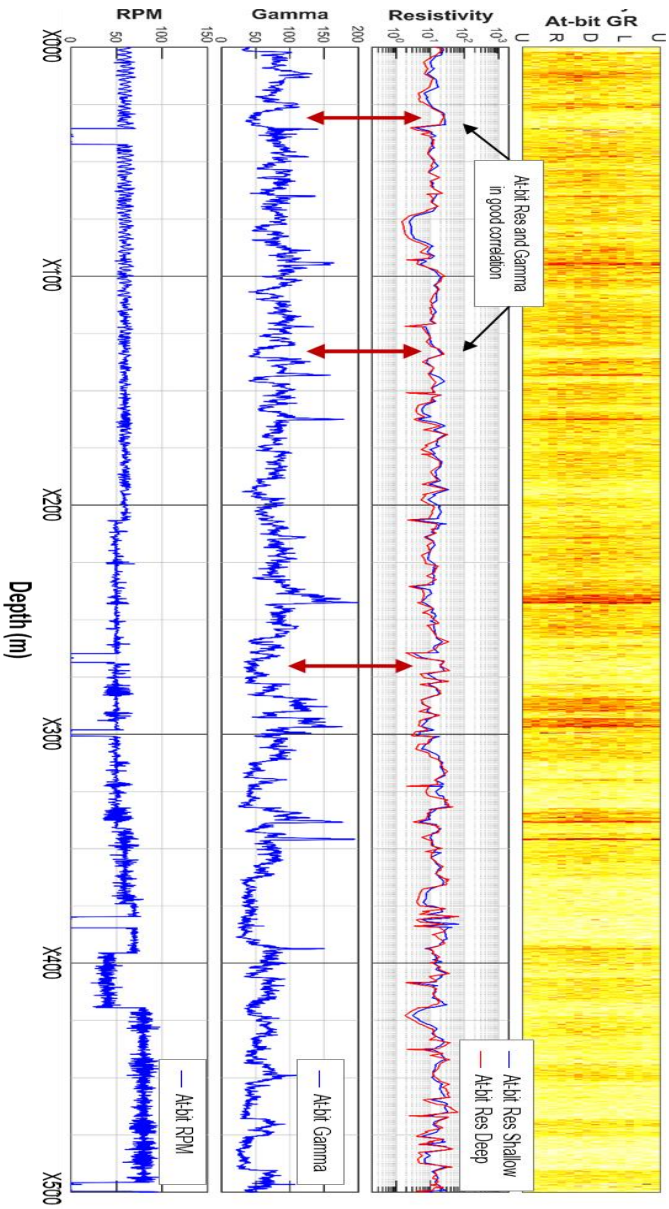
Field Example – Low-angle Well, Oil Base Mud

Date	—	09/2020
Location	—	Canada
Mud type	—	OBM

- ✓ At-bit resistivity and At-bit gamma data acquired from the same 6.75” sub
- ✓ At-bit deep and shallow resistivities trend each other well, indicating measurement consistency
- ✓ At-bit resistivity in good correlation with gamma, showing good confidence in the measurements



GEOTRACKER™ DUO

AT-BIT AZIMUTHAL RESISTIVITY & AZIMUTHAL GAMMA TOOLS

Well Resolutions Technology

Field Example – Low-angle Well, Oil Base Mud

Date	—	09/2021
Location	—	Canada
Mud type	—	OBM

- ✓ At-bit resistivity and At-bit gamma data acquired from the same 6.75” sub
- ✓ At-bit resistivity shows close correlation with gamma, indicating good confidence in the measurements

Max Sand Content	<1%	<1%	<1%
Max Number of Recuts	4	4	4
Receiver Gap Collar			
Drop-in Length	35 in	35 in	35 in
Max OD	4.75 in	6.75 in	8.25 in
Connection	3-1/2 IF	4-1/2 IF	5-1/2 IF
Yield Strength	18,000 lbf-ft	34,000 lbf-ft	75,000 lbf-ft
Make Up Torque	12,000 lbf-ft	24,000 lbf-ft	58,000 lbf-ft
Receiver Assembly			
Drop-in Length (with one metal centralizer)	64.5 in		
OD	1.875 in		
Measurement			
Inclination @ Bit			
Range	0 - 180 degrees		
Repeatability	±0.2 degrees (sliding)		
Measure Point to Bit	12 in		
Azimuthal Resistivity @ Bit (Available in GeoTracker or GeoTracker DUO)			
Range	0.1 – 200 ohmm		
Accuracy	10% (< 10 ohmm) or 10 mmhos (> 10 ohmm)		
Depth of Investigation	Up to 30 in. (0.76 m)		
Vertical Resolution	6 in. (0.15 m)		
Number of Sectors	16		
Measure Point to Bit	16 in. (0.41 m)		
Azimuthal Gamma @ Bit (Available in PayzoneTracker or GeoTracker DUO)			
Range	0 - 1000 AAPI		
Accuracy	±5API @ 250API		
Number of Sectors	16		
Measure Point to Bit	16 in (0.41 m)		
Battery Life (With Both Resistivity and Gamma)			
CC-cells Tools	Up to 130 hrs		
DD-cells Tools	Up to 200 hrs		
Recommended Operating Parameters			
RPM	Up to 200 for minimum fatigue		
Formation Resistivity	2 -200 ohmm for optimal short-hopping		
Mud Resistivity	2 -200 ohmm for optimal short-hopping		
Vibration	Max 20 Grms, 50-1000Hz		
Shock	Max 500 G, 0.5ms (z-axis), 1000 G, 0.5ms (x- or y-axis)		
Running Below a Mud Motor**			
Max Bend Setting	1.50°	1.50°	1.50°
Max DLS Rotating	15°/100ft	8°/100ft	6°/100ft
Max Surface RPM	60	60	60
Max Mud Motor RPM	180	180	180

*Single sensor only (resistivity or gamma). **Do not run any stabilizer. Most mud motors have higher WOB capacity than GeoTracker.
